

PROBLEM SET 1

Tuesday, September 10th, 2019

The branch manager of a pharmaceutical outlet, A-Plus Medical, wants to implement a software application that can compute the dosage and cost of prescription drugs at point-of-sale. Write a program to complete this task given the following specifications;

Program Structure

✓ Initialization

```
const drug = {name: "Lonart", expires: "08/2023", price: 850, tablets: 6, days: 3};
```

```
console.log("*** Welcome to A-Plus Medical ***");
```

✓ Input

```
var dosage = prompt("Enter dosage (in days): ");
```

✓ Output

```
Number of Days      ---      dosage
```

```
Number of Tablets   ---      (dosage / drug.days) * drug.tablets
```

```
Cost of Medication  ---      (dosage / drug.days) * drug.price
```

Normal Requirements

- Use popup windows for user interface (prompt and alert).
- Number of days must be in multiples of 3 (i.e. 3, 6, 9, 12...).

Expected Requirements

- Perform data type validation for required input(s).
- Perform data format validation for required input(s).

Exciting Requirements (optional)

- Present monetary values as N 1,234.56.
- Implement object-oriented programming.

Additional Information

Filename: point_of_sale.html

Submission: Thursday, September 26th, 2019.
