

DAY 26 – PROBLEM SET III

Tuesday, October 29th, 2019.

Problem Statement

You are a software engineer hired by a catering service company to create a POS application ([lunch2go.html](#)).

System Requirements

1. INPUT - The system operator should select 1 of 5 meal packs (without the prices) from the menu presented in the table below.
2. PROCESS - The business logic of the program should generate the price a selected meal pack based on the conditions presented in the table below.
3. OUTPUT - The program should display the quota and total price of a selected meal pack in Nigerian Naira (default) as well as US Dollars, using the current exchange rate.

#	MEAL PACK	QUOTA	TOTAL
1	Fried Rice	200	700
	Salad	100	
	Chicken	400	
2	Eba	200	600
	Egusi/Ogbono	100	
	Assorted	300	
3	Jellof Rice	200	500
	Moi Moi	100	
	Beef	200	
4	Beans	200	400
	Plantain	100	
	Fish	200	
5	Yam	250	350
	Sauce	100	

Additional Information

- ✓ The program should be executed repeatedly until the system operator “Enters (2) for Exit”.
- ✓ Use `prompt` for input and `alert` for output.

Subm. Format: Web Browser.

Subm. Date: Monday, December 2nd, 2019.
